PROFESSIONAL SUMMARY

Student of the University Technical Degree in Programming (UTN) with a strong focus on Linux infrastructure, DevOps culture and Backend development. I run my own homelab where I apply Infrastructure as Code (IaC) practices, virtualization and automation of self-hosted services. I am looking for my first opportunity as a DevOps, SRE or Backend Trainee/Junior, bringing proactivity, analytical problem-solving skills and a strong self-taught profile.

TECHNICAL SKILLS

Languages: Java, Bash, Python, SQL, MongoDB, JavaScript, TypeScript, HTML and CSS
Infrastructure: Linux, CI/CD, Docker, Proxmox, Portainer, Ansible, Terraform, Tailscale, Reverse Proxy, Git, GitHub, Virtualization and Networking
Observability & Monitoring: Prometheus, Grafana, Loki, Promtail, Uptime Kuma, Node Exporter, cAdvisor

PROJECTS

Personal Homelab

Technologies: Proxmox, Docker, Portainer, Linux, Debian, local AI, Bash, Terraform, Ansible, monitoring and observability stack, Tailscale and networking.

Homelab focused on learning infrastructure, virtualization and deployment of self-hosted services. Includes Linux server administration, Docker, CI/CD, Forgejo, Ansible, Terraform, media services, remote access through Tailscale, and the development of an AI-based personal assistant (Puck) integrating local models with Ollama. An ever-evolving project that keeps growing with new services and infrastructure improvements.

AI Virtual Assistant (Puck)

Technologies: Python, APIs, Bash, Docker, Ollama, networking, monitoring and observability stack.

Administration of a Proxmox VE server with LXC containers on Debian, including physical storage management. Built in Python and integrated through the APIs of Open WebUI, Ollama, Proxmox, SearXNG and the monitoring and observability stack, using webhooks to capture alerts and metrics about the state and resource usage of the homelab and its services.

Academic Projects Repository – TUPaD UTN (Full Stack Development)

Technologies: Java, Python, JavaScript, TypeScript, HTML/CSS, MySQL, MongoDB.

Collection of applications, APIs and scripts developed during the Programming degree, centralized on GitHub. Backend logic built with Object-Oriented Programming (OOP) and integration with relational (MySQL) and NoSQL (MongoDB) databases, plus user interfaces implemented with frontend technologies (HTML/CSS, JS, TS).

EXPERIENCE

Administrative Staff | Rodaequip S.R.L / Crediworld – Esteban Echeverría
February 2025 – September 2026
Bank transfer management, invoicing, cash handling and cash register reconciliation.

Production Operator | Offal Exp S.A – Burzaco, Buenos Aires
2024
Packaging, labeling, sorting and secondary packaging.

EDUCATION

University Technical Degree in Programming – Universidad Tecnológica Nacional (UTN) (August 2025 – present)
High School Diploma, Natural Sciences – Instituto Apostolado Católico (2018 – 2023)

LANGUAGES

English – Intermediate (B2): fluent technical reading, intermediate writing. Speaking in development.
